Tile production line improvements

PRODUCTION INCREASE

SACMI for optimized productivity

Increase the productivity of your mix preparation line thanks to the unique technological know-how of SACMI personnel who, after a visit at your factory, will be able to propose the best solution for each customer.

Enhanced output

ADVANTAGES

- Productivity increase
- Technological problem solving
- Update of old machines

PRODUCTION INCREASE

Technical features

SACMI's technical and technological support is able to assess in detail the operation of each continuous mill (MTC/MMC) and propose different production increase solutions according to Customer requirements. *The production increase solutions* (to be evaluated on a case-by-case basis) act on the existing plant and may be of various kinds:

- **Optimisation** of operation, through appropriate changes: to the working parameters (power/speed), the configuration of the internal lining and the type and level of the grinding media;
- Mechanical and/or electrical **modification**, such as: installation of an intermediate diaphragm, change from fixed to variable speed, replacement of the control panel with one of the latest generation;
- **Increasing** the capacity of the grinding line with the introduction of a new MMC module, which can be installed either "in-line" with the existing mill or "stand-alone".
