Tile production line improvements

# COMPACT: DRY COLOURING

SACMI for flexibility

The **Compact** dry colouring system allows coating the atomized powder granules with a layer of colouring pigment properly measured. This system allows using the atomizer for the production of one base powder, resulting in more efficient and cost-effective productivity.

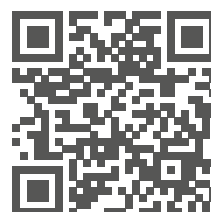

Extended capabilities

## ADVANTAGES

- Maximum product repeatability
- Settable quantity for production batches
- Continuously monitored automated process
- Easy system positioning upstream of the point of use

Tile production line improvements

# COMPACT: DRY COLOURING

## Technical features

The **Compact** has been developed with a non-invasive mixing technology that allows an even colouring without contaminations. The machine eliminates the problem of production changeover, ensuring measuring accuracy and minimising production handover.

This system is compact and easy to install and can be integrated into the existing production lines.
