### SACMI for flexibility

The **JIT** system allows the dissolution of dry pigments for the preparation of coloured compounds intended for wet slip colouring.

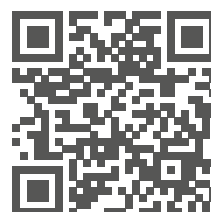

Extended capabilities

## ADVANTAGES

- Zero waste
- Compact solution
- Continuous data monitoring
- Preparation time reduction
- Just-in-time colour preparation

See other revamping solutions  
for powder preparation

## JIT

### Technical features

The system uses an extraction system to send pigments from big bags to two colour dissolution stations, where they are mixed with water and, if necessary, slip. The quantity of pigments to be prepared can be set according to the recipes, in a safe, quick, automated and repeatable way.
