SKID SLIP COLOURING

SACMI for a longer equipment lifetime

The **SKID** for wet slip colouring is an automatic and computer-based machine for the continuous wet measuring of one or more dyes and one base. This is the most efficient and accurate wet colouring system available on the market.

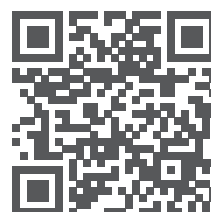

Continued production

ADVANTAGES

- Maximum production flexibility
- Maximum product quality and repeatability
- Settable quantity for production batches
- Reduced costs
- Continuous data monitoring

SKID - SLIP COLOURING

Technical features

Designed and manufactured to be integrated directly into the production line before the atomizer service tank, it ensures a continuous, fully repeatable supply of coloured slip to the production process, with a queue management system and automatic washing that can be set from the HMI.
