# SWAP: FILTER & CYCLONE POWDER DISSOLVER

SACMI for energy savings

The **SWAP** dissolver uses powder recovered from cyclones or atomizer / process filters and scraps from pressing to generate slip with the desired density value, so as to directly reintroduce it into the production process.

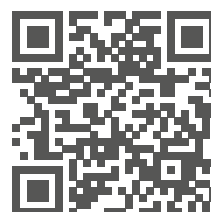

Optimized consumption  
management

## ADVANTAGES

- Increased worker health and safety
- Direct reintroduction of powder into the production cycle
- Ready to use
- Rapid return on investment
- Automatic, almost maintenance-free process

## SWAP: FILTER & CYCLONE POWDER DISSOLVER

### Technical features

Water and powder dosing is set via the interface keypad.

The electrical panel is equipped with a PLC for the adjustment of pump motor, water-powder ratios and system automation.

The density is controlled by load cells installed on the system, which measure the weight of the mixture, ensuring continuous density control.
