QUICK CONNECTION OF OIL FILTERING UNIT

SACMI for efficiency

The use of the loading and filtering unit is essential for eliminating contamination problems of the oil.

The attachment kit makes the connection of the control unit easy and fast.

Reduced Downtime

YOUR ADVANTAGES

- **EASY USE:** the connection is easier, it does not require the use of stairs or the hole opening
- **SPEED:** it allows to considerably reduce the time required for connecting the filtering unit

QUICK CONNECTION OF OIL FILTERING UNIT

Technical features

The connection of the oil-filtering unit is sometimes complicated and difficult. It is often necessary to open the hole, depressurize the tank, etc. By mounting the proposed kit, connecting the control unit becomes easier and faster. It will also be possible to connect the control unit without stopping the press and therefore the production.
